1. Applicant's election of Species I, Claims 1-4, in Paper dated 6/21/07 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. The abstract of the disclosure is objected to because the Abstract contains the undefined acronym "IIR". All such acronyms should be defined at the instance of their first use within the Abstract. Correction is required. See MPEP § 608.01(b).
3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-4 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims recite a method / apparatus for performing a mathematical function.

"[t]o satisfy section 101 requirements, the claim must be for a practical application of the Sec. 101 judicial exception, which can be identified in various ways:

- . The claimed invention "transforms" an article or physical object to a different state or thing.
- . The claimed invention otherwise produces a useful, concrete and tangible result,..."

See "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility" OG Date: 22 November 2005.

In order for claims to be statutory, claims must include a practical application with a concrete, useful, and tangible result. However, claims 1-4 merely disclose elements / steps of performing mathematical function without disclosing a **practical application**.

Art Unit: 2193

**with a concrete, useful, and tangible result, as they are pre-emptive in any application.** Therefore, claims 1-4 are directed to non-statutory subject matter.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Deerfield.

Deerfield teaches, e.g., see Fig. 1, the claimed combination elements. They are: ADDER [which is considered the claimed means for combining] for adding signal  $XN$ , output of  $X(N-1)$  [which is considered the output of first IIR filter because it is the result of feedback loop via ADDER], and output of  $X(N-3)$  [which is considered the output of second IIR filter because it is also the result of feedback loop via ADDER].

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cited references are art of interest.
